

Be Among the Very First to Experience the All-new DRC Rater

The new way to automate manual and legacy pricing tools.

The exciting, new DRC Rater, is a powerful innovation for insurers of all sizes to fully automate existing Excel® raters and other manual or legacy pricing tools. This lightweight, cost effective service faithfully replicates even the most complex rater, and is deployed on enterprise-level infrastructure and a SQL Server database foundation. From a pricing engine to a centralized, version controlled repository that ensures safety and security of all intellectual property and data, the DRC Rater offers a complete solution to automate and expedite pricing, indication and underwriting decision making and obviate outdated Excel® raters and pricing tools.

Say “Goodbye” to Outdated Raters with DRC

Even large insurers with sophisticated policy administration systems still have manual or legacy processes that burden staff, slow down productivity and increase the likelihood of errors.

DRC Rater is powered by our RS X Rating technology and fully automates existing Excel® Raters and other manual or legacy pricing tools. This powerful new offering from DRC allows actuarial, underwriting and product teams to:

- Maintain and secure all data in a centralized version controlled repository that keeps internal IP safe
- Easily enforce all underwriting rules and pricing guidelines
- Bulk upload and manipulation of large schedules of risk data (properties, fleets, scheduled items etc.), through a familiar Excel® like browser experience
- Review complete risks as well as apply credits and debits to obtain market prices
- Produce rating worksheets and other PDF output for inclusion in submission packets
- Save risk data for use in analytics and export from the rating system into a system of record via JSON/XML/direct SQL calls

Cost-Free, Risk-Free Two Week Test Drive

DRC understands the risk involved to the vendor selection committee, especially with the rapid advances in current technology. To demonstrate the power and prowess of our technologies, we offer a no-cost two-week proof-of-concept (POC) and deployment of a client's Excel® rater on the DRC insurance platform. Within two weeks, our product configuration analysts will modify the existing Excel® rater to match the DRC Rater requirements to create a live RESTful web service for pricing, a risk description web portal for users to enter risk data and a callable underwriting rules engine. Our product configuration team will refactor customized raters, optimize large data tables and restructure the risk data collection to optimize the rapid creation of enterprise-strength web services.

This free test drive de-risks vendor evaluation by demonstrating our speed and agility to handle the rating complexities, automation of underwriting guidelines and the presentation of risk data collection to the user.

DRC Rater Features

- Rating Engine
- Web Based Administration of rate plans
- Version control of rate plans
- Rollback rate plans
- Effective Date driven
- UW Rules Logic
- Forms Attachment Logic
- Notes
- Integrate into existing UW workbench
- Integrates into any quote system
- Replaces Excel® raters
- Generated risk data capture screens
- Presentation of detailed premium details to users in real time
- Document generation of rating worksheets
- Account/Customer Management Tools
- Save risk data to SQL Server 2016 Database
- Bulk import from Excel® schedules
- Amend, Copy and Recall
- Document upload
- Manipulation of scheduled list in Excel® like browser application
- Auto generated XML snapshot of all data
- Generate indication documents

About DRC

For nearly half a century, DRC has provided powerful and trusted software solutions to the Property & Casualty (P&C) insurance industry. Large carriers, small start-ups and MGAs alike in the United States and globally deploy DRC's SaaS and onsite solutions to manage total written premiums in excess of \$7 billion. DRC's web-based administration system expedites implementation, lowers costs and simplifies maintenance across insurance products. Our leading RS X Rating allows business users who price risks and model products in Microsoft Excel® Workbooks to create a version-controlled, web service process throughout the entire insurance ecosystem with minimal need for any programming resource. All DRC clients receive market-leading solutions, expert implementation and our commitment to deliver to their complete satisfaction.
