

Accelerating Insurance Digital Transformation through Dynamic DRC APIs

APIs have become essential tools for business ecosystems across industries, but insurance lags behind. Most platforms already deliver basic APIs, however changing lines of business parameters can involve laborious and error-prone manual processes. The versatility of dynamic APIs speed the development and rollout of new products offering a clear business bonus. In addition to reducing the time and expense of interoperability, faster integration allows for plug-and-play partnerships and a seamless customer experience, along with more rapid prototyping of new products. Perhaps most importantly, DRC's APIs enable insurers to have complete control to craft the customer experience through all user channels while harnessing the underlying power of our technologies. In fact, dynamic APIs are so important they don't simply expedite connection and collaboration – APIs offer a fundamental strategic advantage. Now dynamic DRC APIs open up new opportunities for the Specialty Market available nowhere else.

Connectivity To Quote, New Business, Issuance, Renewals, Billing and More

Whether you are looking to connect an agent portal, an underwriting portal or work directly with consumers via a mobile app, DRC's APIs enable insurers to safely create new programs and collect the required data.

DRC's APIs, like the new DRC Rater, are key drivers of growth and digital transformation by:

- Facilitating the integration of backend data and applications
- Empowering carriers and brokers to work more efficiently and productively than ever before
- Updating product changes automatically as they occur, allowing users to collect and represent data in real-time for completion and submission
- Moving data among disparate systems and building use cases for further investment in dynamic APIs across the digital business platform

No-Cost, High-Speed Two-Week Challenge

DRC understands the risk involved to the vendor selection committee, especially with the rapid advances in current technology. That's why we offer a no-cost, no-obligation Two-Week Challenge, which allows you to test what our technologies can do, no strings attached. Our product configuration team will build out a product that matches the existing functionality in your production environment to show how your business can run faster and more efficiently with DRC.

Quote

You've never quoted like this before. Full automation. Unlimited flexibility.

Policy

No matter how complex or how many exceptions, our policy processing has you covered.

Rating

All-new RS X Rating built for business strength, performance and reliability.

Billing

Submit one payment or one million with equal security, accuracy and efficiency.

Claims

Expert workflows and extensive controls make your claims processing effortless.

Agency Admin

Producers come and go. Manage, document and verify eligibility for every single one.

Flexible, Adaptive Policy Administration

Across Quote, Policy, Rating, Billing, Claims and Agency Administration, DRC furnishes configurable, scalable technology that provides complete policy administration for personal, commercial and specialty insurance. It's a complete insurance platform with dynamic underwriting portals, allowing insurers of all sizes to enjoy easy access to powerful functionality tailored to service their customers' unique needs.

DRC's API Library

Our robust, comprehensive library of dynamic APIs allows carriers to individually deploy, adjust and redeploy modules without affecting the entire system. Compared to the slow roll-out and error messages that stem from basic APIs, DRC's advanced APIs increase the quality of the data, the customer experience and the overall success of the partnership. APIs cover the critical "last mile" to enable insurers to create a universal experience – efficiently and easily.

About DRC

For nearly half a century, DRC has provided powerful and trusted software solutions to the Property & Casualty (P&C) insurance industry. Large carriers, small start-ups and MGAs alike in the United States and globally deploy DRC's SaaS and onsite solutions to manage total written premiums in excess of \$7 billion. DRC's web-based administration system expedites implementation, lowers costs and simplifies maintenance across insurance products. Our leading RS X Rating allows business users who price risks and model products in Microsoft Excel® workbooks to create a version-controlled, web service process throughout the entire insurance ecosystem with minimal need for any programming resource. All DRC clients receive market-leading solutions, expert implementation and our commitment to deliver to their complete satisfaction.
